A guide to
Woodlice

small natural history series

Following the success of the first 'short book' series, callum&mark have turned their creative eyes on the marvels of the natural world. One of them can play the violin amazingly well now, and they both whistle. In addition to writing books, callum directs and produces stop-motion films, and mark is very enthusiastic about small wiggly things. This book could not have been produced without the enthusiasm for life of small acorns and other seeds.

number 1 of a natural history series
